1 Seaborn Exercises

AICTE Faculty ID: 1-3241967546

Faculty Name: Milav Jayeshkumar Dabgar

Date: July 10, 2025

Time to practice your new seaborn skills! Try to recreate the plots below (don't worry about color schemes, just the plot itself).

1.1 The Data

We will be working with a famous titanic data set for these exercises. Later on in the Machine Learning section of the course, we will revisit this data, and use it to predict survival rates of passengers. For now, we'll just focus on the visualization of the data with seaborn:

```
[1]: import seaborn as sns
import matplotlib.pyplot as plt
%matplotlib inline
```

```
[2]: sns.set_style('whitegrid')
```

```
[3]: titanic = sns.load_dataset('titanic')
```

```
[4]: titanic.head()
```

```
[4]:   survived  pclass    sex  age  sibsp  parch    fare embarked  class \
0         0        3   male  22.0     1     0   7.2500         S   Third
1         1        1  female  38.0     1     0  71.2833         C   First
2         1        3  female  26.0     0     0   7.9250         S   Third
3         1        1  female  35.0     1     0  53.1000         S   First
4         0        3   male  35.0     0     0   8.0500         S   Third

      who  adult_male  deck  embark_town  alive  alone
0   man         True  NaN  Southampton    no  False
1 woman        False   C    Cherbourg   yes  False
2 woman        False  NaN  Southampton   yes   True
3 woman        False   C    Southampton   yes  False
```

4 man True NaN Southampton no True

```
[5]: # Let's explore the dataset structure
print("Dataset shape:", titanic.shape)
print("\nColumn names:", titanic.columns.tolist())
print("\nDataset info:")
print(titanic.info())
print("\nFirst few rows:")
titanic.head()
```

Dataset shape: (891, 15)

Column names: ['survived', 'pclass', 'sex', 'age', 'sibsp', 'parch', 'fare', 'embarked', 'class', 'who', 'adult_male', 'deck', 'embark_town', 'alive', 'alone']

Dataset info:

<class 'pandas.core.frame.DataFrame'>

RangeIndex: 891 entries, 0 to 890

Data columns (total 15 columns):

#	Column	Non-Null Count	Dtype
0	survived	891 non-null	int64
1	pclass	891 non-null	int64
2	sex	891 non-null	object
3	age	714 non-null	float64
4	sibsp	891 non-null	int64
5	parch	891 non-null	int64
6	fare	891 non-null	float64
7	embarked	889 non-null	object
8	class	891 non-null	category
9	who	891 non-null	object
10	adult_male	891 non-null	bool
11	deck	203 non-null	category
12	embark_town	889 non-null	object
13	alive	891 non-null	object
14	alone	891 non-null	bool

dtypes: bool(2), category(2), float64(2), int64(4), object(5)

memory usage: 80.7+ KB

None

First few rows:

```
[5]:   survived  pclass   sex  age  sibsp  parch   fare  embarked  class \
0         0      3  male  22.0    1     0   7.2500          S  Third
1         1      1 female  38.0    1     0  71.2833          C  First
2         1      3 female  26.0    0     0   7.9250          S  Third
3         1      1 female  35.0    1     0  53.1000          S  First
```

4		0	3	male	35.0	0	0	8.0500	S	Third
---	--	---	---	------	------	---	---	--------	---	-------

	who	adult_male	deck	embark_town	alive	alone
0	man	True	NaN	Southampton	no	False
1	woman	False	C	Cherbourg	yes	False
2	woman	False	NaN	Southampton	yes	True
3	woman	False	C	Southampton	yes	False
4	man	True	NaN	Southampton	no	True

2 Exercises

****** Recreate the plots below using the titanic dataframe. There are very few hints since most of the plots can be done with just one or two lines of code and a hint would basically give away the solution. Keep careful attention to the x and y labels for hints.******

****** *Note! In order to not lose the plot image, make sure you don't code in the cell that is directly above the plot, there is an extra cell above that one which won't overwrite that plot!* ******

```
[6]: sns.jointplot(x='fare', y='age', data=titanic)
```

```
[6]: <seaborn.axisgrid.JointGrid at 0x11687d940>
```

[41]:

[41]: <seaborn.axisgrid.JointGrid at 0x11d0389e8>

```
[7]: sns.displot(titanic['fare'], bins=30, kde=False)
```

```
[7]: <seaborn.axisgrid.FacetGrid at 0x1168c1fd0>
```

[44]:

[44]: <matplotlib.axes._subplots.AxesSubplot at 0x11fc5ca90>

```
[8]: sns.boxplot(x='class', y='age', data=titanic)
```

```
[8]: <Axes: xlabel='class', ylabel='age'>
```

[45]:

[45]: <matplotlib.axes._subplots.AxesSubplot at 0x11f23da90>

```
[9]: sns.swarmplot(x='class', y='age', data=titanic)
```

```
[9]: <Axes: xlabel='class', ylabel='age'>
```

```
/Users/milav/Code/qip-dl/.venv/lib/python3.13/site-packages/seaborn/categorical.py:3399: UserWarning: 15.2% of the points cannot be placed; you may want to decrease the size of the markers or use stripplot.  
warnings.warn(msg, UserWarning)
